Hello Nige M0VKC !
Your problem seems to be similar to the problem as had SQ9J. but in fact may be it may be caused another phenomenon .
Because you get message Not connected to internet , it may be do , due problem with net , but not on your local lan net
but in the internet net .
You will need to examine whether the route to QRZ.COM, or on the route to HAMQTH.COM ,
is present problems with the network.
First in the your browser call QRZ.COM or HAMQTH.COM and observe how long it answer .
Second , follow the command in a DOS window (black) as follow (first START - CMD.exe }
and next tracert hamqth.com.

As you see there are one point after CVT-Bratislava with timeout , but packet reaches target kwpa.cz .
When you get many timeout and packet not reaches target , then this route is bad .
Then you must try in a another time (2-3 hour later } . May be trace will rebuild

For QRZ.COM this try does not make sense , because QRZ.COM have switching off this ping and tracing possibility .
May be from your location is another behavior for tracing .
Then you can only test on default browser .

If you still get this not logging to QRZ.COM , try configure Internet Explorer 11 as for Jakub SQ8J .
Choice default Setting in this picture . Sorry - it is in Polish language - Poziom domyslny .

If you still will have problem - register there and write that .

        Best regards Vy 73 de Jerzy SP9AUV
