HAM_SECRETARY version 3.4.2 at 23.01.2016 year

In this release I do the following changes
• For Polish stations are now permitted breaking the callsign by   /P   /M   / QRP. In the QSL_Via on QSL card is then
   entered the OT and No. QSL bureau. Previously, if callsiggn was be for example. SP7XXX/P, then the program had written in a
   report that the station is not services by the Polish QSL bureau.
• For the callsign breaking by /LH (LightHouse)   /FF (Flora Fauna)   /MM and other combinations breaking is not automatically
   entered OT and No. LH - this is prefix for Norway   /MM is not accepted by the ARRL .All these combinations of broken characters are usually
   invented independently by ham-radio and do not comply with the requirements of Regulation of the RadioComunication . If you necessarily want
   to send to the station QSL card then you can act like one of the methods ;
• for the SP4XXX/LH station box, in the field QSL_VIA write SP4XXX. If the station is services
 by the Polish QSL bureau then be entered in the field QS_Via on
   the QSL card OT and No bureau
• in the list of special station operated by SP7DQR page
    http://sp7dqr.pl/downloads/stacje_specjalne.csv

enter the station special: ie SP4XXX/LH has QSL Manager SP4XXX. Link to enter special stations
