BUREAU_ALL_QRZ_COM_FI version 2.4.6 at 16.03.2015 year

In this release was do the following changes:

- Due to the overall changes in the server HAM_QTH.COM .converted completely module . dll for the service and retrieve data from this server.
- Some components in the program were replaced with new components more safer. .
- Because the practice so far has shown that there are users who have installed Logger32 in unusual places - such as disk R (sixth partition) - which causes abnormal behavior installation program install_upgrade_bureau.exe . Therefore, it is furnished with a mechanism for recognizing such situations and the program install_upgrade_bureau.exe tells user to manually choose a directory where it is installed Logger32. Typically Logger32 should be installed:
 - for Windows 7 i 8 in a directory C:\Logger32
 - for Windows XP in a directory C:\Program Files\Logger32

It should be emphasized that Logger32 install on a different drive than C: be considered as a large user error, because all programs must be fitted to the system drive C:

and periodically do a system backup for him. I do not recommend the use of Windows Backup windows, as it creates a very great files, what are not

packed by any packer. If Logger32 will be on a different drive than C:, then your backup of the system C: will not contain our Logger32 and you lose all QSOs.

To make matters worse copy of Windows also makes a backup of the full disk, also partition what you excluded strictly from backup . A windows disk backup

without any batting can take 400 GB backup when the system on C: takes only 70 GB Making a backup takes a long time. As a

backup tool I recommend BOOTITNG that do zipped backup (2 x), only the selected partition and doing it without running Windows.
