Hello !

First I describe exactly with screenshot what problem have F1UIJ .

=====

Until now I used BV7 to print the QSL, mine but also that of OM that I manage.

I just installed HAM SECRETARY, great software!

I'm doing the templates for the different QSL.

I have a question that I can not solve.

In the help there is a button to delete an adif field.

I can not find this button on the software, why?

No Delete ADIF Field present !

How to delete an adif field to replace it with another one?

Best 73 Andy F1UIJ

=====

There are my answer .

Delete Adif Field and generally Edit template was be present in a previous version and proper deleted was do only for the last field . But many user use this function for edit any field , and then integrity template was not proper and do many problem .

Sou I delete EDIT function in my program . Edit is do in a another way .

I must do appropriate changes in .chm help .

1. First - many mistakes is do when use choice ADIF Field from list . Sou program display name adif field

what must be approval

If you choose wrong field , then there select CANCEL .

2. In a proces create template I recommend save file of pattern not ended yet template as 1.LBL , 2.LBL , 3.LBL etc

In this way if you do error in a proces creating , creating again a pattern from scratch is very inefficient .

Exit from program and choose last proper template for example 3.IBL and continue you work create template.

If you create good template you save this template with choiced name , and can delete in a subdirectory file what have prefix digital , 1.LBL , 2.LBL etc.

I see Andy that you are design template for full QSL .

First - you must have proper printer , what do transport QSL card inside printer without slide .
About this I write on the page

[http:// sp9auv.com/EN/index.html?discusion_different_printers_and_printing_method.php](http://sp9auv.com/EN/index.html?discusion_different_printers_and_printing_method.php)
in a section : shifting the QSL card into a printer mechanism.

If any person have trouble with design template for printing directly to a QSL card
I can design for this person template . Only send to me file from scanning your rear part QSL
and tell me with with accuracy 0,5 mm size your QSL card . If you have special wish what special
ADIF fields ,
describe it .

I do also others changes, for example on sreen not display small winows icon for alignment
in a vertical pattern . Now it is do automatically .
I must do appropriate changes in a help .chm file

Best regard de Jerzy SP9AUV
