Thanks for the answer Jerzy.

I have not any problem for the template creating to print directly on the QSL.

I had created template for all the different QSL I manage. While doing tests of impression I realized that for one of the logs of the OMs that I manage there is not always the frequency of data for the QSOs, by cons the band is always indicated there. This is because it uses multiple loggers and some only record the band for the QSO.

I wanted to change the adif field FREQ by BAND in the template. What I see from your answer is that it is not possible, too bad.

So I'm going to create a new template with the band field in the QSO line.
