Program BUREAU\_ALL\_QRZ\_COM\_Fl.exe is designed to work with the Logger32 and four data servers

for download personal data about ham-radio. The program retrieves the data from the server and sends it to the Logger32

The server can be manually selected from the following servers :

QRZ.COM

HAMCALL.NET

HAMQTH.COM

DXWATCH.COM

- For choice server you must press the button CONFIG .

- In CONFIG - you can also to select the language of with be working the program, and what data are sent to Logger32.

- Downloaded data and especially the QSL\_Via is checked and corrected , so that the field is suitable then to

place on the QSL card. Practice has shown that ingenuity users in entering here incorrect and illogical

data is unlimited. The program also in this case, is doing this well because it was designed with use elements

artificial Intelligence . QSL\_Via field correction rules are described on page

[http://sp9auv.com/EN/index.html?fieldqsl\\_via\\_via\\_qsl\\_manger.php](http://sp9auv.com/EN/index.html?fieldqsl_via_via_qsl_manger.php)

- This Program also displays information if, for a given callsign is lack of worldwide QSL bureau .

- The program is very fast , because the data program downloaded only text data without downloading images .

- If you want to see and graphics that a station on the server you have to press the button Show in browser .

- If A station entered the server data such as address internet in the form of a link or e-mail then it will be

they are shown in the form of hyperlink in blue and after clicking on which will be called internet browser or client program such as e-mail. Thunderbird

- program from data downloaded from the server extract ZIPP zip code and city QTH . For the Polish station is correct

ZIPP code - while for other countries due to the variety of encoding methods for ZIPP this may not always be correct .

You can download program from the page
