Full version history for BUREAU_ALL_QRZ_COM_FI I describe on page
http://   sp9auv.com/EN/index.html?downloading_programs_cooperating_wi th_logger32.php

Bellow I describe two last version

BUREAU_ALL_QRZ_COM_FI version 2.4.6 at 16.03.2015 year
In this release was do the following changes:

• Due to the overall changes in the server HAM_QTH.COM .I do completely new module . dll for
the service and retrieve data from this server.
• Some components in the program were replaced with new components more safer. .
• Because the practice so far has shown that there are users who have installed
Logger32 in unusual places - such as disk R (sixth particion) - which causes
abnormal behavior installation program install_upgrade_bureau.exe .
Therefore, it is furnished with a mechanism for recognizing such situations and the
 program install_upgrade_bureau.exe tells user to manually choose a directory
where it is installed Logger32. Typically Logger32 should be installed:
•   for Windows 7 i 8 in a directory C:\Logger32
•   for Windows XP in a directory C:\Program Files\Logger32

BUREAU_ALL_QRZ_COM_FI version 2.4.5 at 07.01.2015 year
In this release was do the following changes:

•   Removed bug reporting relies on are exceedingly rare message as "is not valid integer
value. .
 After numerous tests in investigating the causes of the message (with the participation of
station F6FLU - Daniel and EA3XP Station - Xavier - many thanks to them for that)
it was established that the cause was do by   "joyful work of some colleagues," sending
to the spot the wrong content of the message, such as for example KP11BK<> tnx qso !!   :).
This message contains the following invalid characters <> : . These characters are used as
markers for the beginning and end of the name fields in the standard ADIF, and the starting number
of characters such as the <NAME: 5> Jerzy. In this standard Logger32 sends and
receives messages from an external program cooperating with Logger32. This resulted in
the creation of erroneous error when trying to convert lenght field to integer type.
Program immunized to these erroneous values in the Comment field for the window DXSpot.
•   The program now when displaying the country give this from the APP_COUNTRY sended
by Logger32,
instead of looking at their own DXCC list. Because Logger32 cooperating with CLUBLOG DXCC
list in terms
of where the ARRL not accepted the callsign , it displays as a COUNTRY inscription "Not
accepted for DXCC" .

To determine the presence of QSL bureau, however, because it needs NR_ADIF, still uses its own DXCC list.

• The program now checks whether the callsign station is correct, that contains only true ASCII characters .

Happy New Year!
I work logger32 with windows 10.
what happened in the last two weeks.
I can not logged to server in "BUREAU_ALL_QRZ_COM_FI.EXE,v 2.4.7".

Hello SV1OCA !
To this time i not have Windows 10 installed .
Perhaphs I will be install Windows 10 on my virtual machine under Vmware , and then try
I too do not trust this installation of Windows 10 on Windows 7.
Tell mee if on Windows 7 or Windows 8 BUREAU_ALL_QRZ_COM_FI cooperated properly with Logger32 ??
Can you send mee same screenshoot from Windows 10 , when appear this error , or any trouble occurs .

Hello SV1OCA !
To this time I not get sreenshot , what I am ask .
Look at the section WINDOWS 10 and screen for working SP9AUV product under this system
and topic Logger32_and_BureauALL_QRZ_COM_underWin_10 , where you can see the
screnshot that it work .
If you still will be have problem send me your screnshot .
I waiting report negative or positive .

BUREAU_ALL_QRZ_COM_FI version 2.4.6 at 16.03.2015 year

In this release was do the following changes:
• Due to the overall changes in the server HAM_QTH.COM .converted completely module . dll
for the service and retrieve data from this server.
• Some components in the program were replaced with new components more safer. .
• Because the practice so far has shown that there are users who have installed Logger32 in
unusual places - such as disk R (sixth particion) - which causes
  abnormal behavior installation program install_upgrade_bureau.exe . Therefore, it is furnished
with a mechanism for recognizing such situations and the
  program install_upgrade_bureau.exe tells user to manually choose a directory where it is
installed Logger32. Typically Logger32 should be installed:
• for Windows 7 i 8 in a directory C:\Logger32
• for Windows XP in a directory C:\Program Files\Logger32

It should be emphasized that Logger32 install on a different drive than C: be considered as a large
user error, because all programs must be fitted to the system drive C:
and periodically do a system backup for him. I do not recommend the use of Windows Backup
windows, as it creates a very great filesw, what are not
  packed by any packer. If Logger32 will be on a different drive than C:, then your backup of the
system C: will not contain our Logger32 and you lose all QSOs.
To make matters worse copy of Windows also makes a backup of the full disk, also partition what
you excluded stricte from backup . A windows disk backup
without any batting can take 400 GB backup when the system on C: takes only 70 GB Making a
backup takes a long time. As a
backup tool I recommend BOOTITNG that do zipped backup (2 x), only the selected partition and
doing it without running Windows.

BUREAU_ALL_QRZ_COM_FI version 2.4.9 at 22.11.2016 year

In this release I was do the following changes:
Cleared at the request of users translate to ASCII station address downloaded from all servers
QRZ, so that it
remains in a code page that uses a website server for personal data. This is usually a page in
UTF-8. Whether it will be
good for the nation, such as Asia, Japan will show practice. Please, send to me any comments
and observations
on this subject . best to my discussion forum http://sp9auv.com/fudforum

Best regards Vy 73 de Jerzy SP9AUV
