Hello all friends !

We are pleased to inform users of my programs that I developed after about 4 years of works, the new project "AWARD_SECRETARY" to do applications for any awards .

It is no longer a single program, but the entire system to do in principle applications for any awards .

Certainly there are many amateurs - who wanted to obtain awards , but they are terrified that work , what must devote to search for relevant QSOs and cards that meet conditions , fill those QSOs predicted publisher paper forms and send this by regular post mail or by file with online method .

Besides doing this for awards ARRL in an optimal way with a minimum cost for checking QSOs, it's backbreaking work. You will need besides learn about the many concepts for awards as: SUBMITTED, APPLIED, GRANTED, AWARDED or others what serves us a lot of loggers and page www in ARRL.

And here you need my system "AWARD_SECRETARY", which will free you from this hard work. The program is based on a database in MySQL format to which the data are read from .adif file produced by any logger.

What the functions it performs:

1. Implementation of the 1st application for a award in the prescribed form by the publisher in the paper form or as a file for the online method .
2. Create the next application for award (endorsement), if they are provided by publisher diploma
3. Automatic selection confirmed QSOs for the award , depending on the preset method confirmations
(only QSL or only LOTW or mixed (First QSL second LOTW) or (FIRST LOTW second QSL)
4. There is an additional possibility to manually change this selection for a QSO , because for example ,
I feel sorry for sending this QSL card in such nice graphical form.
5. Continue conducting the supplements for award reported manually for old amateur, who already have some awards. AWARD_SECRETARY offers there three methods of recovery the old
start state for the award , basis of an external file containing the reported and possibly

approved QSOs

6. The data are read from the file . ADIF from any logger. These data can be examined in terms of

DXCC List on page CLUBLOG by the build internal web browser.

7. As we have already have a database in a format MYSQL database we can ask database MYSQL

for a additional special SQL queries - such as give me a Unreliable_QSL_manager_direct and how long I'm waiting for QSL card from them, Countries send - not confirmed, Time is waiting QSL card,

Time is waiting direct QSL card, etc.

8. Cost optimization for checking QSL cards or LoTW confirmation for the ARRL awards .

Cost optimization tactics for checking QSO for the ARRL DXCC awards can be illustratively on this example of English stations. QSO should be selected according to the scheme

First QSO - G3AA on 10m CW

Second QSO - G3AB on 20m band Phone

3rd QSO - G3AC on 15m band digital emission (RTTY or PSK)

Here we have a 45 Cents cost on 3 band and 3 emissions. Of course we also have resolved the

category MIXED EMISSION . With increasing bandwidth you should increase emissions.

This makes sure that the program do this for first application

as well as subsequent next endorsements .

9. Adding a new award to the system is only I need development the additional module . dll in which it is contained the whole philosophy of the requirements for a award.

10. Because it is added only an additional .dll, all awards have the same user interface, so you do not need to learn a new programs.

11. Before installing the software you must first install the database MYSQL (very important). Suitable

file can be downloaded from my website. If you have trouble installing MYSQL - I can help you ,

and remotely install you the database based on a program TeamViewer - the perfect program for remote helping user . You can download it from my website

http://sp9auv.com/index.html?pobieranie_programu_dxcc_xml_list.php

At the moment is developed 21 awards and 8 special queries .

Files for install AWARD_SECRETARY and database MYSQL database can be downloaded from my website

http://sp9auv.com/EN/index.html?download_project_award_secretary_and_version_history.php

By clicking on the links below you can see how look screenshots from my system

Screen - all QSOs in the database
