Hello all !

From F1UIJ Andy , user my program BUREAU_ALL_QRZ_COM.exe I get this post

Hi Jerzi,

I have been using your lookup on qrz.com for years.

After an absence of more than a week I am no longer logged on the server.

The problem I have is that there is no way to log me. When I click on the "Login" button nothing happens ... the mini bronzer does not open and the computer is blocked.

The only solution remains CTRL + ALT + Del and disconnect.

I am using Windows 10 Family version 1703 (built 15063.413) 64 bits. My default browser is Firefox, no problem login with it on qrz.com.

With the N2AMG qrz lookup no problem its work fine, but i prefer yours!

Can you help me solve my problem?

Best 73 F1UIJ Andy

From F1UIJ Andy , user my program BUREAU_ALL_QRZ_COM.exe I get this post

Hi Jerzi,

I have been using your lookup on qrz.com for years.

After an absence of more than a week I am no longer logged on the server.

The problem I have is that there is no way to log me. When I click on the "Login" button nothing happens ... the mini bronzer does not open and the computer is blocked.

The only solution remains CTRL + ALT + Del and disconnect.

I am using Windows 10 Family version 1703 (built 15063.413) 64 bits. My default browser is Firefox, no problem login with it on qrz.com.

There are perhpas reason why my program for login not work corect.

I put in a Google question " Windows 10 Family version 1703 what is version" .

I get answer in a this link

[https:// docs.microsoft.com/en-us/windows/whats-new/whats-new-windows -10-version-1703](https://docs.microsoft.com/en-us/windows/whats-new/whats-new-windows-10-version-1703)

I have in my two computers version 1607 .This version 1703 is for "creator update" person who belive Microsoft

and want be as betta - tester for a new Windows future . I do not belong to these people and

never choose this proposed option

Still have version 1607 .

To see what was do Microsoft next choose link for a difference

[https:// blogs.technet.microsoft.com/windowsitpro/2017/04/05/whats-ne
w-for-it-pros-in-the-windows-10-creators-update/](https://blogs.technet.microsoft.com/windowsitpro/2017/04/05/whats-new-for-it-pros-in-the-windows-10-creators-update/)

[https:// support.microsoft.com/en-us/help/4014193/features-that-are-r
emoved-or-deprecated-in-windows-10-creators-update](https://support.microsoft.com/en-us/help/4014193/features-that-are-removed-or-deprecated-in-windows-10-creators-update)

The main change is described on this last page and concerns also Edge .

Why Edge is so important . Now in Windows 10 Internet Explorer is not present , and in this place is present Edge .

Every component for browser in a language for programming is based on the Internet Explorer , also if default is Firefox .

But in version Internet Explorer 11 Microsoft deleted from browser HTML5 standard . In this place forced own standard , what never will become real standard.

In this reason for my program DXCC_XML_LIST for CLUBLOG i must do own browser based on Chrome component .

But in a BUREAU_ALL_QRZ_COM was not need this own browser .

BUREAU_ALL_QRZ_COM is still work in a Windows 10 but version 1607 .

What i propose :

=====

First method

1. For security create backup for all system Windows . I use BOOTINNG ver 1.81 or v 1.83 , what do zipped (2:1) copy for

for all partity system before your sytem start .

2. Came back to version 1607 Windows 10 . Call in Setting History for actualization or Version History and next

choose Uniinstal version 1703 . Of course do rebott system

If you decide to came back to version Windows 10 version 1607 this is important link how do this

[http:// www.thewindowsclub.com/rollback-uninstall-windows-10-creator s-update](http://www.thewindowsclub.com/rollback-uninstall-windows-10-creator-s-update)

=====

Second method

1. For security create backup for all system Windows . I use BOOTINNG ver 1.81 or v 1.83 , what do zipped (2:1) copy for

for all partity system before your sytem start .

2. Try change in a Edge browser option in this way

In this place I put for F1UIJ Andy twoo screenshot for , but I will not put it there , because Andy found better solutions .

(Thank you Andy) what is present in a next post on this forum

If this twoo method not do positive efect or you will have a trouble , I must meet in a Skype and next use

Team Viewer - where I can try do Second method .

Please send me a answer , also if you not get solve your problem .

I invite you on my discussion forum

There are answer from Andy F1UIJ , who found good solving this problem

=====

Hi Jerzi,

Many thanks for your reply. The problem are solved !!

I had another computer in Windows 10 creator on which is installed Logger32 and your qrz
lookup.

On this second computer it worked correctly. That's why I searched on the computer on the shack
what was the problem.

That's all I've done until it works.

I cleared the cache and cookies (was not effective).

I restored the advanced settings of Internet Explorer on the Advanced tab by clicking the "Reset
Advanced Settings" button. But that was not enough.

I then clicked the "Reset ..." button just below it.

Then I restart the computer and there "Miracle" it works!

By clicking on the button "Logging" I have the mini explorer that opens and I can logging on
qrz.com.

I think this procedure can be useful to other OMs who would have the same problem.

You must completely reinitialize Internet Explorer.

You may notice that Windows10 Creator version 1703 works with your soft.

Thanks again for your messages and programs.

Best 73

Andy F1UIJ

Additional where is in Windows 10 buttons what is described in the previus post

=====

Because in Windows 10 Internet Explorer 11 is not present in the menu or on the desktop
calling Internet Explorer 11 is do from this icon

After calling Internet Explorer 11 options for setting parameters is from

Next choose Reset button
